EDUCATION

University of Zulia

Four years of undergraduate studies - Bachelor of Sciences in Computer Science

- Enrolled since Sept. 2017 to 2021

PROJECTS SUMMARY

Spotify Web App

A web application that utilizes the Spotify Api to fetch and update the user's data, allowing them to play search, save and play a track, album, artist or playlist. Made with:

- Typescript, to prevent type related errors and improve scalability.
- SASS and CSS modules, to modularize the styling and make style refactoring simpler
- Next.js, to make use of its server's functionality to communicate with the Genius Api and fetch the currently playing song's lyrics.

Mundana Blog

A blog/news template to be used in conjunction with the Contentful Api. It delivers a clean, elegant design, with all the data in the user's Contentful space. Made with:

- TypeScript, to make use of its type declarations for the different types of content received from the api.
- ChakraUI, for its CSS in JS capabilities.
- Contentful, to work as the Content manager. The site fetches the data from this site, automatically updating as more data is created.
- Next.js, to make use of its Static Generation and Incremental Static Regeneration functionalities, thus allowing the site to always remain fast and updated.
